## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-29, drawn to an isolated nucleic acid encoding a fusion polypeptide and a fusion polypeptide, are classified in class 536, subclass 23.1 and class 530, subclass 350.
- II. Claims 30-31, drawn to a method for treating an HIV infection, are classified in class 514, subclass 2.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the polypeptides of Invention II can be used in other processes, such as, protein purification assays. Thus, the inventions above are patentably distinct.

# Election of Species

This application contains claims directed to the following patentably distinct species: various polypeptides, SEQ ID NO:1-9.

A. Following the election of Invention I or II, one of SEQ ID NO:1-9 must also be selected.

Art Unit: 1648

The polypeptides all contain a human Fc $\Delta$ C1 at the C-terminal domain. Other components within the polypeptide, however, are arranged in different orders of sequence within the N-terminal region and at various length of amino acids across SEQ ID NO:1-9. The species are independent or distinct because the different polypeptides containing different domains at various length of amino acids and at a different order within the polypeptide would not only differ in their structure but also their function.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic because no claim is limited to a specific polypeptide or a nucleic acid encoding a specific polypeptide.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

## **CONCLUSIONS**

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michelle Horning whose telephone number is 571-272-9036. The examiner can normally be reached on Monday-Friday, 8:30 am to 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 570-272-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for unpublished application is available through Private PAIR only. For more information about PAIR system, see htt://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
